OUR HOUSE HAS ADVANCED AIR

Anne's family just installed Panasonic Complete Air Management System, which uses the latest technology to make air more comfortable.

How will their life change?

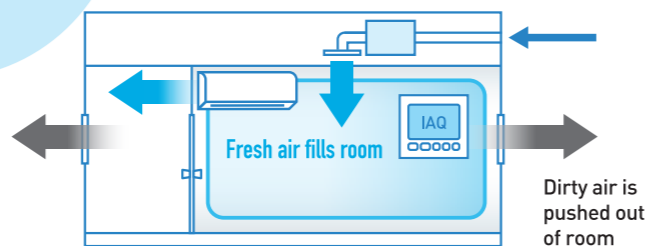

Advanced AI Air Quality Management

Complete Air Management System uses IAQ Remote Controller sensors that link with AI in the cloud to analyze your home's air quality and determine the optimal settings for air conditioning and ventilation. Your indoor air environment is automatically optimized.

How ventilation works

There are various ways to exchange air in a room. For example, one method mechanically exhausts air to let the equivalent amount of air in naturally.

Complete Air Management System mechanically supplies air. It brings fresh air inside to let air in the room exhaust itself naturally.

Since AI controls the operation
via the cloud,

**I Don't Have To
Do Anything.**

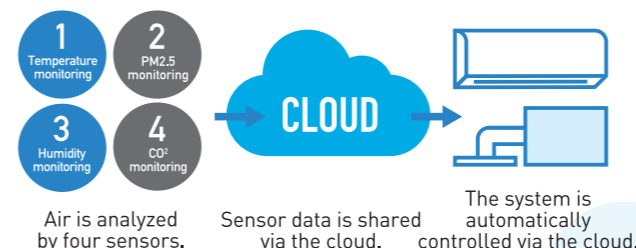

The air quality values on IAQ Remote Controller
give me confidence

the air environment is healthy

For My Children.

The system is automatically controlled via the cloud

Point 01

CO₂

control

But with Complete Air Management System...

I wake up easily and Feel Fully Refreshed!

I feel ready to give it my all at work, too.

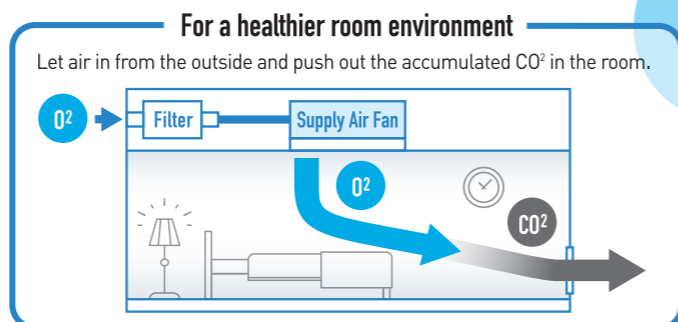

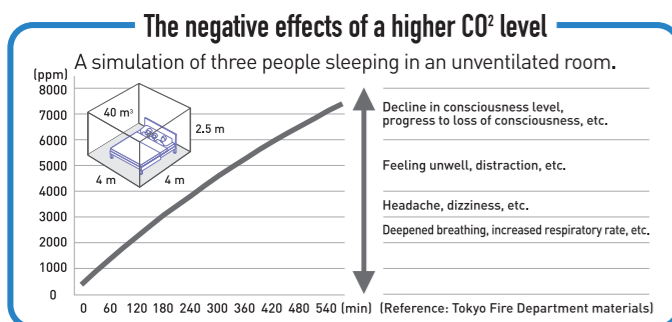

I used to feel sick when staying in a closed room for too long. But I haven't felt that way since installing Complete Air Management System.

I feel groggy after waking up in the morning...

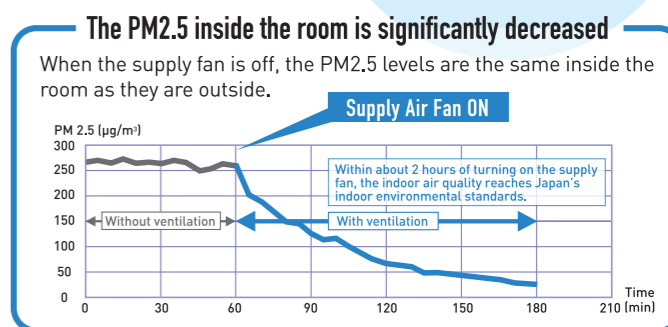

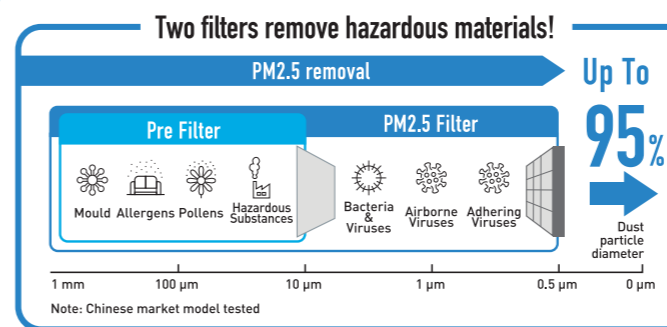

Air Fills With CO₂ As You Sleep!

People always emit CO₂ that can cause headaches, dizziness, and even loss of consciousness in high concentrations. When Complete Air Management System detects too much CO₂ in your room, it exchanges the air with more oxygen-rich air from outside. Ventilation also adjusts depending on how many people are in your room.

Fresh, Clean Air!

A high-performance filter in Complete Air Management System removes hazardous substances like PM2.5 from the air whenever indoor air (including house dust) is exchanged with air and oxygen from outside.

But with Complete Air Management System...

I don't need to open the windows, So Traffic Noise or Bugs Won't Get In!

I was worried about exhaust gas from cars passing my house, but the air is always refreshing! I'm also happy to see that air conditioning costs are lower because less hot air is brought in for ventilation.

The traffic is noisy when I open the windows... I'm worried about infectious diseases from mosquitos, as well.

Point 02

PM2.5

control

Point 03

Humidity

control

But with Complete Air Management System...

ZZZ...

(Where shall we go tomorrow...?)

Thanks to Complete Air Management System, I never wake up from being too hot or cold. I sleep well every day and enjoy the fresh air. I also get more done because I feel healthier.

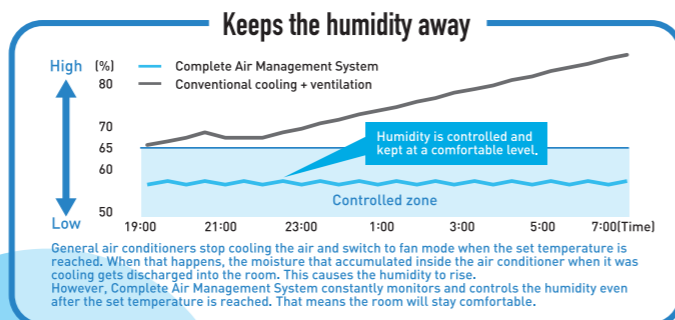

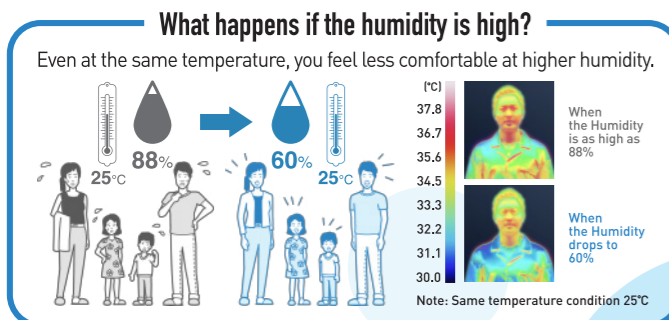

I wake up in the middle of the night and can't get back to sleep!

Humidity, Like Temperature, Affects Sleep Quality.

When the weather is humid, you feel damp and uncomfortable. You also feel hotter because your sweat doesn't easily evaporate. Complete Air Management System maintains the right amount of humidity at the right temperature for a comfortable air environment.

Ideal Air With One Press!

To operate Complete Air Management System, simply connect IAQ Remote Controller with the cloud via the smartphone app. There are various functions, but you can just register your air conditioner and supply fan in your app and set the temperature — at home or remotely — and leave the rest to AI.

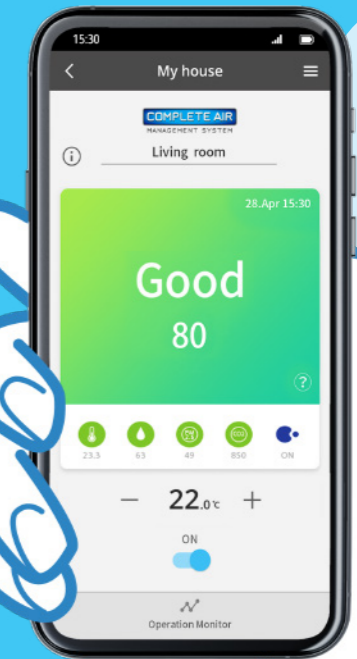

The room is so humid and uncomfortable when I get home...

But with Complete Air Management System...

If I turn it on before I get home, It'll Feel Great when I do!

All I need is my smartphone! The handy app also tells me whether indoor air is clean.
