

HOTEL TV: THE FIVE-STAR SOLUTION FROM PANASONIC

Panasonic TV sets have long included a hotel mode. The latest generation offers new, attractive solutions thanks to TV>IP.

Panasonic was the world's first manufacturer to integrate TV>IP technology into many of its televisions on the basis of the SAT>IP standard. SAT>IP is a new standard for distributing TV signals in a network. It allows programmes to be shared cost-efficiently among multiple televisions.

A separate box is no longer needed behind the TV, which is a saving that hoteliers, system integrators and fitters will be glad about. **And there's more:** innovative Hotel TV solutions can now be offered from a single source thanks to our alliance with TRIAX and D-Link.

BENEFITS OF THE PANASONIC TV>IP SOLUTION

- ★ **Energy-efficient, smart Hotel TV / hospitality solutions** in a range of sizes that significantly reduce installation work and cost
- ★ **Use television without a separate TV box** in the hotel room
- ★ **Easy to wire**
