

LUMIX S1H RAW-data transfer to Atomos Ninja V

- Continuation of successful corporation with Atomos
- Full-Frame RAW-data output via HDMI for LUMIX S1H
- Live-Preview at IBC2019 in Amsterdam

Wiesbaden, Germany, 2019-08-29 – Panasonic proudly announces the continuation of the successful development corporation with Atomos Limited. Together, the companies will realize RAW-data transfer over HDMI from the LUMIX S1H to the Atomos Ninja V Monitor Recorder.

Developing RAW-data out

As the world's first full-frame mirrorless camera capable of 6K internal video*¹, the LUMIX S1H combines the quality of professional cinema-grade video cameras with the high portability of mirrorless system cameras. In order to expand the camera's functions and creating an optimal workflow for filmmakers, Panasonic wants to offer RAW-data output for utmost quality also when recording externally and for this seeks full compatibility to the Atomos Ninja V 4K/60p HDR Monitor Recorder.

At the camera's global launch in Los Angeles on August 27th 2019, Panasonic's Director of the Imaging Business Unit, Yosuke Yamane said:

"Atomos and Panasonic have a good relationship and we have been providing 4:2:2 10bit 4K HDMI output recording for the LUMIX GH-series. We are now developing RAW output via HDMI with Atomos for the S1H."

Atomos CEO Jeromy Young added in their press release:

"We are very proud of continuing to develop new ground-breaking technology with a company of the calibre of Panasonic. We are both highly committed to the democratization of filmmaking for creators, and the ability to transmit RAW over HDMI from the S1H to a Ninja V is a major leap forward in this endeavour."

The new Lumix S1H will be shown working with the Atomos Ninja V at the upcoming IBC2019 show in Amsterdam from September 13th. More information on the combination will be available during the show.

*1 6K/24p, world's first as a full-frame digital interchangeable lens system camera, as of August 27, 2019. Panasonic research.

About Panasonic
